Shroud entrance

Gas canister

Counter

Trap Check

- Look for any carcasses, especially downslope
- Check mounting bracket, loosen screws if too tight
- Drain CO from trap and trigger until safe

*If the cartridge continues to hiss the trap is leaking and needs to be fixed

- Clean inside of trap, trigger, and bracket
- Make sure ALP coin is removed and threads are correct
- Install new CO and reset counter (as needed)

- Smear small amount of fresh bait below bracket
- Screw lid back on
- Click trap back onto mounting bracket
- Update flagging
- Kilo! Record bait presence, CO₂ charged/replaced, counter # if applicable, carcass presence
